

## Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at <http://about.jstor.org/participate-jstor/individuals/early-journal-content>.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact [support@jstor.org](mailto:support@jstor.org).

# PREVALENCE OF DISEASE.

*No health department, State or local, can effectively prevent or control disease without knowledge of when, where, and under what conditions cases are occurring.*

## IN CERTAIN STATES AND CITIES.

### SMALLPOX.

#### Maryland—Hancock.

The State department of health of Maryland reported by telegraph July 21, 1914, that a new focus of smallpox infection had been reported in Maryland through the notification of 1 case of the disease at Hancock, Washington County.

**LEPROSY.****District of Columbia.**

The health officer of the District of Columbia reported that during the month of June, 1914, a case of leprosy had been notified in the District of Columbia in the person of a white male, aged 41, native of North Carolina, who had lived in the District since June 1, 1914, and previously at the United States quarantine station near Port Townsend, Wash., and before that in various places in the United States. The patient had served in the United States Army in Cuba and the Philippines. He is under the supervision of the health department of the District of Columbia and has been isolated.

**South Carolina—Georgetown.**

The State Board of Health of South Carolina reported that a case of leprosy had been notified in Georgetown, S. C., in the person of J. W., colored, male, aged 32, native of Georgetown, S. C. Clinical diagnosis of leprosy was made July 1, 1914, and this was verified bacteriologically July 15. The patient had been associated during the year 1908 as a shipmate with another negro who had died of leprosy in 1911. He has been isolated under the supervision of the health authorities.
